

About the new academic building of TTPU

Yesterday, the university hosted an opening ceremony of a new academic building of TTPU, building of which took 6 months.

The purpose of the opening of the new building was to increase number of lecture halls and classrooms for an increasing number of students and applicants, as well as the creation of the new laboratories.

The building consists of 3 auditoriums with a total capacity of 500 seats, equipped with a huge LED screen, an interactive panel and the latest innovative equipment. Also, there are 2 laboratories in the building – an IT laboratory and a materials science laboratory, as well as an Akfa Class training and seminar room.

The building was built from the university's own non-budgetary funds.

We hope that the creation of this building will facilitate the learning process and provide great opportunities for students to become worthy specialists in their field.
