

The only source of knowledge is experience.

One of the big advantages for students of the Civil Engineering and Architecture Department is the opportunity to have both lectures, as well as practical lessons on construction sites.

Third-year bachelor students of the department conducted their practical part of the Geodesy course at the LOT6 construction site in Tashkent city. In practice students under the supervision of Prof. Saidislomkhon Usmanov participated in the quality assurance process using geodetic instruments together with specialists from PE BOMI Construction Engineering Co., LTD. This helps students strengthen their theoretical knowledge and gain 'hands-on' experience.
