

Second trip by “Unlock Tours” program

On the 10th of March of this year, Unlock Tours program at Turin Polytechnic University in Tashkent organized the next trip to the largest factory of Artel company, producing the household appliances.

45 students of Turin Polytechnic University in Tashkent, who passed through a selection among more than 110 people, had the opportunity to visit Artel factory and get acquainted with one of its largest sectors – the section of thermoplastic household appliances production and section of washing machines’ and refrigerators’ assembly.

The guides and the administration of the plant explained the details of the conveyor process, the principles of equipment operation and answered numerous questions of students. A cognitive excursion interested every student. Especially, students were impressed with the volume of household appliances production by domestic manufacturers.

We are very grateful to the administration of Artel company factory and the Unlock project team for the opportunity to get acquainted with the factory’s activities and to gain knowledge in the home appliances production area.
